

Part one:

Apple's new teacher prototype, the iRenner, is on his way to debut himself. He will be the first product to do his own presentation. But on the way, the evil Android Zipin trips iRenner and he drops his note cards. Oh no! When bends down to pick them up, iRenner realizes that he doesn't know how to sort! Luckily, he has a 24/7 team of Geniuses (you) who can help him! Implement a selection sort program to reorganize the 10 cards from lowest to highest. They are in the order [2, 9, 5, 3, 10, 8, 6, 7, 4, 1].

Part two:

The evil Android Zipin managed to take pictures of the cards, and needs YOUR help to to organize them! {2:"I am the iRenner", 9:"And I like milk", 5:"I am able to teach", 3:"And today I will be telling you about myself", 10:"Thank you, have a nice day.", 8:"And a Kirby main in Smash Bros, 6:"In a classroom environment", 7:"I am also a graduate student", 4:"I am the most innovative product Apple has created yet", 1:"Hello everyone"}
